

Definitions

Web accessibility

The practice of making the web usable for all people, with or without disabilities. This includes a design that is easy and intuitive to use and clean code that can be read and understood by a screen reader for someone who is blind.

Web standards

A combination of best practices, guidelines and specifications that have been set up across the world wide web. By following web standards, we make ourselves accessible and visible to a wider audience.

Internal Website

Anything within the UNBC website (starts with www.unbc.ca).

External Website

A website that does not start with www.unbc.ca

Local navigation

The left hand menu links that live right below the Section title. This menu holds links that link out to pages within the UNBC website.

Section

The UNBC website is divided into sections like Forestry, Geography, About UNBC, etc. The Section title displays in the top left hand corner, right below the main navigation bar. Each section has a local navigation menu with links to all of the pages belonging to that section. Web Editors have access to entire sections of the web.
